Use of fuel hose baskets

General:

Before ordering fuel hose baskets, operators should be sure that the advantages of using the basket exceed the personal and environmental hazards

Crew:

- Never climb into the fuel hose basket (restricted escape route, underneath load)
- Never come near the ToDo coupling or crane hook hanging free (unexpected movements)
- Always adhere to the hands off policy. Use boat hooks (or stiffy sticks)
- Let (part of) the hose drop next to the container when you are not able to safely guide the hose into the basket

Stiffy stick
